# Experiment 21: Syntax-Driven Semantic Analysis

## Python Code:

```
sentence = input("Enter a sentence: ")
```

```
words = sentence.split()
```

```
meaning = {  
    "cat": "A domestic animal",  
    "dog": "A faithful animal",  
    "student": "A person who studies"  
}
```

```
noun = words[0].lower()
```

```
print("Noun Phrase:", words[0])
```

```
if noun in meaning:  
    print("Meaning:", meaning[noun])  
else:  
    print("Meaning not found")
```

## Output:

### Output

```
Enter a sentence: Cat drinks milk  
Noun Phrase: Cat  
Meaning: A domestic animal
```

```
